

BFCBHRJ-104 – Senior Application Server Specialist| Managed Services | Bahrain

About the role:

The job holder is responsible for effective provisioning, installation, configuration, operation and maintenance of the middle-tier layer in IT. The individual is expected to play a critical role in liaising with Developers, Application Analysts, Project Managers as well as Infrastructure Specialists and Service Desk personnel to ensure Application Servers are effectively utilizing the underlying infrastructure to run and perform as required by the applications.

Your Responsibilities:

- Install, configure, and troubleshoot Application Servers for all BFC application environments (Production, UAT, Test, Development, etc.) hosted on-prem and on cloud.
- Liaise with the Application and Development teams to configure and optimize the middle-tier layer to effectively run the hosted applications.
- Manage Middle-tier integration and Orchestration system and ensure all APIs are well configured, fully monitored and covered under performance management.
- Liaise with the Infrastructure teams and third parties to ensure adequate and efficient utilization of infrastructure resources.
- Manage application infrastructure on AWS environments.
- Manage corporate public websites and internal SharePoint sites.
- Create, manage, and maintain IT operation workflows automation.
- Work closely with Change Management to ensure that all owned changes are logged and carried out as per the Change Management process.
- Coordinate with Project Managers and Project teams and stakeholders to ensure project targets are met.
- Continuously develop own knowledge in the latest standards of application interface integration in an enterprise environment.
- Work with other IT experts to explore, research and recommend the industry best practices in middle-tier and application server technologies.
- Extend the level of support to cover the administration and configuration of applications.

About You

- University Degree in Computer Science, Engineering or related field
- Red Hat certified system administrator (Recommended)
- Microsoft MCSE (Recommended)
- AWS Solution Architect (Highly recommended)
- Minimum of 3 years' experience in IT, preferably in a related field in Enterprise Application Integration, Development, Web Server or middleware support and administration.
- Experience in setting up, maintaining, and monitoring of applications on AWS is highly recommended.
